

henry&hymas

*forward thinking
building futures*

H&H Consulting Engineers are civil, structural, water, environmental and infrastructure engineers.

We work in residential, retail, commercial, industrial development markets and have expanded into water, environment and infrastructure.

Our teams are ultra-responsive and clients enjoy working with our dedicated and service oriented engineers.

Henry & Hymas has a reputation for excellence, integrity and reliability.

Our experience spans over 30 years in the Australian design and construction market.

urban development

- We provide a full range of civil and infrastructure design services including:
- civil design for roads
 - drainage and carparks
 - bulk earthworks
 - subdivision
 - DA and CC documentation
 - master planning
 - due diligence
 - pavement design
 - temporary structures
 - water sensitive urban design
 - stormwater management
 - utility management plans

commercial

Design services for commercial development include:

- civil and structural design
- concept design integration
- DA and CC documentation
- Façade design
- geotechnical assessment
- foundation design
- shoring and retaining structures
- precast panel
- tilt-up design
- precast shop drawings
- ramps and roads
- pathways and landscape
- steel frames
- stairways
- construction services and support

Henry & Hymas work with developers, builders, planners, urban designers, architects, authorities and utilities to deliver high quality projects.

Our design teams are professional, dynamic, practical, proficient and enthusiastic and ensure compliant outcomes.

residential

Integrated civil and structural design services include:

- civil and structural design
- engineering and infrastructure reports
- geotechnical assessment
- foundation and piling design
- shoring and retaining structures
- precast panel design tilt-up design
- precast shop drawings
- ramps and roads
- pathways and landscape
- disabled access and stairways
- construction and dilapidation reports

retail

Our specialist design services include:

- civil and structural design
- design and construction
- design integration
- DA and CC documentation
- geotechnical assessment
- foundation design
- shoring and retaining structures
- precast panel
- tilt-up design
- precast shop drawings
- ramps and roads

industrial

We have extensive design services for industrial development including:

- civil and structural design
- design and construction
- design integration
- DA and CC documentation
- geotechnical assessment
- foundation design
- shoring and retaining structures
- precast panel
- tilt-up design
- precast shop drawings
- ramps and roads
- pathways and landscape
- steel frames
- stairways
- construction services and support
- specifications

Our highly skilled, specialist structural design team, together with the architects and other disciplines, work to ensure the design intent and functional performance of all projects is maintained.

With great experience and creative insight, Henry & Hymas will seek to deliver integrated, and exceptional design outcomes.

infrastructure & water

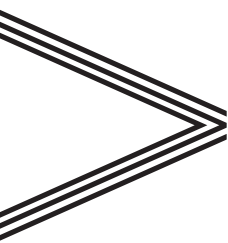

Our service for water and infrastructure projects include:

- IWCM
- feasibility studies
- wastewater treatment
- stormwater harvesting
- roofwater harvesting
- water
- sewer reticulation design
- reservoir design
- auditing
- sewer mining
- flood studies
- construction and operation
- energy substations
- roads and traffic
- communications
- solar systems

strata

Strata services include structural investigation, assessment and reporting for:

- defects and remedial report
- existing conditions report
- dilapidation report
- cracked and spalling concrete
- cracked brickwork
- reo corrosion
- foundation movement
- water proofing water leaking
- termite infestation
- underpinning techniques
- steelwork corrosion
- facades and lintels
- rectification design and specification
